

# GURNOOR GILL

647-549-1644 | [gillg.dev@gmail.com](mailto:gillg.dev@gmail.com) | [linkedin.com/in/gill-g](https://www.linkedin.com/in/gill-g) | [github.com/gill-g](https://github.com/gill-g) | [gillg.vercel.app](https://gillg.vercel.app)

## Education

**Sheridan College – Trafalgar Campus, Oakville, ON**

**Sep. 2025 – Present**

*Advanced Diploma, Computer Systems Technology – Software Development & Network Engineering*

*Co-op | GPA: 3.89/4.0*

## Relevant Coursework

- AI & ML – Python
- Enterprise Java (Spring)
- Web Programming
- Web Development
- Software Design
- Database Management
- AWS Cloud Computing
- OS – Linux

## Experience

### Learning Mode AI

**Jan. 2025 – May 2025**

*Software Engineer Intern | Python, Redis, OpenAI, Docker, AWS*

*Remote*

- Developed an AI-powered platform that transforms videos into interactive, synchronous lectures using Retrieval-Augmented Generation (RAG) and Large Language Models (LLMs) for context-based responses.
- Contributed to an event-driven microservices architecture in Python, integrating Redis for caching to reduce response latency across services.
- Oversaw infrastructure deployment with Docker and AWS, ensuring a scalable and reliable application serving 500+ users.

## Projects

**Football Transfer Value Predictor** | *Python, pandas, scikit-learn, matplotlib, REST API*

**Aug. 2026 – Present**

- Built a machine learning model that predicts a football player's market value from performance data, then compares the prediction against their actual valuation.
- Pulled multi-season player statistics from the football-data.org API with the requests library, then cleaned and merged the data using pandas.
- Engineered features including goals and assists per 90, minutes played, age relative to peak, and position, and trained a linear regression model with scikit-learn.
- Visualized predicted vs. actual market values with matplotlib to identify under- and over-valued players.

**Datadog Clone – Monitoring Mini App** | *JavaScript, Node.js, Express*

**Sep. 2026 – Present**

- Built a lightweight infrastructure monitoring app inspired by Datadog that collects system metrics such as CPU, memory, and disk usage.
- Exposed collected metrics through a REST API built with Node.js and Express, and rendered them on a live-updating dashboard.
- Created a status dashboard that tracked service uptime and availability over time.
- Implemented threshold-based alerts to flag abnormal resource usage in real time.

**Bubble Pop Game** | *JavaScript, ZIM.js, HTML5 Canvas*

**Feb. 2026**

- Developed an interactive browser game using the ZIM.js canvas framework, with animated bubbles, sprite-sheet pop effects, and randomized audio.
- Implemented a dynamic difficulty system that ramps up spawn rate and bubble speed at timed intervals while increasing a score multiplier to reward survival.
- Built game state management for lives, score, and elapsed time, including a game-over summary screen and input locking to prevent post-game interactions.

## Technical Skills

**Languages:** Python, Java, JavaScript, SQL, HTML/CSS, Bash

**Developer Tools:** VS Code, Git, GitHub, Docker, AWS, Linux, Claude Code, Codex

**Technologies/Frameworks:** React, Spring Boot, Node.js, Express, Redis, RAG/LLMs, pandas, scikit-learn, ZIM.js

**Networking:** TCP/IP, subnetting, DNS, DHCP
