Education

Sheridan College – Trafalgar Campus, Oakville, ON **Sep. 2025 – Present**
Advanced Diploma, Computer Systems Technology – Software Development & Network Engineering *Co-op | GPA: 3.89/4.0*

Relevant Coursework

- AI & ML – Python
- Enterprise Java (Spring)
- Web Programming
- Web Development
- Software Design
- Database Management
- AWS Cloud Computing
- OS – Linux

Experience

Learning Mode AI **Jan. 2025 – May 2025**
Software Engineer Intern | Python, Redis, OpenAI, Docker, AWS *Remote*

- Developed an AI-powered platform that transforms videos into interactive, synchronous lectures using Retrieval-Augmented Generation (RAG) and Large Language Models (LLMs) for context-based responses.
- Contributed to an event-driven microservices architecture in Python, integrating Redis for caching to reduce response latency across services.
- Oversaw infrastructure deployment with Docker and AWS, ensuring a scalable and reliable application serving 500+ users.

Projects

Market Value Predictor | *Python, React, Vite, pandas, scikit-learn, matplotlib, REST API* **Aug. 2026 – Present**

- Built a full-stack web app that uses linear regression to estimate players' worth from performance data, age relative to peak, and position, then shows who looks underpriced or overpriced versus their real value.
- Developed a Python data pipeline that pulls stats and market values for ∼2,500 players across 5 leagues and 3 seasons from two web APIs, with response caching, fallback copies when a source is down, and rate limiting.
- Designed a REST API with FastAPI to list, filter, and look up players and model stats, with query parameters, 404/422 error handling, and CORS.
- Created a React and Vite dashboard to search players, filter by league and position, and sort by the gap between estimated and real value.

Datadog Clone – Monitoring Mini App | *JavaScript, Node.js, Express* **Sep. 2026 – Present**

- Built a lightweight infrastructure monitoring app inspired by Datadog that collects system metrics such as CPU, memory, and disk usage.
- Exposed collected metrics through a REST API built with Node.js and Express, and rendered them on a live-updating dashboard.
- Created a status dashboard that tracked service uptime and availability over time.
- Implemented threshold-based alerts to flag abnormal resource usage in real time.

Bubble Pop Game | *JavaScript, ZIM.js, HTML5 Canvas* **Feb. 2026**

- Developed an interactive browser game using the ZIM.js canvas framework, with animated bubbles, sprite-sheet pop effects, and randomized audio.
- Implemented a dynamic difficulty system that ramps up spawn rate and bubble speed at timed intervals while increasing a score multiplier to reward survival.
- Built game state management for lives, score, and elapsed time, including a game-over summary screen and input locking to prevent post-game interactions.

Technical Skills

Languages: Python, Java, JavaScript, SQL, HTML/CSS, Bash
Developer Tools: VS Code, Eclipse, Git, GitHub, AWS, Docker, Linux, Claude Code, Codex
Frameworks/Technologies: React, Spring Boot, FastAPI, Node.js, Express, Astro, pandas, scikit-learn
Networking: TCP/IP, subnetting, DNS, DHCP
